

Project Requirements:

1. Is any downtime acceptable? Is the app expected to run all year even during holidays and summer periods?
2. Is the user expecting quick runtime even when the system is experiencing high traffic (weeks prior to a graduation)? What is acceptable performance during these periods?
3. Does the user prefer a single page to perform multiple functions or a system that incorporates multiple pages for simplicity?
4. Does the user require real time cart updates or a final page cart screen?
5. Color preference?
6. Design preferences material or other?
7. Would a PWA be an application they would like? (Explain to the use what a PWA is and see if they would like that or if they would like a mobile application?)
8. Would User want a template scheme to save changes for the future use or use a blank template for every year?
9. Push notifications for upcoming graduates?
10. Would they want a design akin to something like a standard shopping experience or would they rather want drop-down choices?
11. Are visuals important to the user?
